H

Hallo Martin DK5EN,

Auf Signal ist es mir zu umständlich, deshalb als mail.

Die drei Bilder im Anhang sind eine Aufnahme um 11:45 12:00 und 12:15 heute.

Links mein PowerNode in Unterneukirchen u. rechts zum Vergleich der GW-DB0MMR-12.

Der Super Node wechselte auch mal vom DB0HOB zum DM0WKB und wieder zurück zum DB0HOB. Etwas später war wieder kein Super Node zu sehen.

Hoffe du kannst was damit anfangen, 73 Hans DD7MH

The image displays four screenshots of the Meshcom software interface, arranged in a 2x2 grid. Each screenshot shows a 'Neighbours' window with a table of network nodes and their status.

Top Left Screenshot (DD7MH-55 - Meshcom): Shows a window titled 'Window: 12 h, 15 row(s) fresh. Exclusive to me (only I hear them directly): DB0AAT-3, DB0HOB-12, DD7MH-1, DD7DH-23, DK5DM-0. Mesh needed.' The table lists 15 nodes with columns for ID, G, M, FN, FX, Cov, Role, and a list of neighbors. Node 1 (DD7MH-55) is highlighted in blue. Below the table, it says 'D1: Direct heard by me over the air. Indirect: only via a neighbour. (G: Gateway: a HEY addressed to HG was seen from this node. 'not' means not observed. (M: Mesh: relay's foreign frames, from its last position frame. (FN: Neighbours: nodes this node hears, as far as this table can hold them. (FX: Exclusive: nodes that ONLY this neighbour hears. This is the value of a relay. (Cov: other direct neighbours that also hear G, 0 = only reach it. Details on the Path page. (Role: Super: largest exclusive share. Needed: has exclusive nodes. Redundant: everything it hears is heard by others.

Top Right Screenshot (DB0MMR-12 - Meshcom): Shows a window titled 'Window: 12 h, 20 row(s) fresh. No exclusive nodes. Mesh is redundant here.' The table lists 20 nodes. Node 1 (DB0MMR-12) is highlighted in blue. Below the table, it says 'D1: Direct heard by me over the air. Indirect: only via a neighbour. (G: Gateway: a HEY addressed to HG was seen from this node. 'not' means not observed. (M: Mesh: relay's foreign frames, from its last position frame. (FN: Neighbours: nodes this node hears, as far as this table can hold them. (FX: Exclusive: nodes that ONLY this neighbour hears. This is the value of a relay. (Cov: other direct neighbours that also hear G, 0 = only reach it. Details on the Path page. (Role: Super: largest exclusive share. Needed: has exclusive nodes. Redundant: everything it hears is heard by others.

Bottom Left Screenshot (DD7MH-55 - Meshcom): Shows a window titled 'Window: 12 h, 25 row(s) fresh. Exclusive to me (only I hear them directly): DB0HOB-12, DK5DM-0, DL3LCR-12. Mesh needed.' The table lists 25 nodes. Node 1 (DD7MH-55) is highlighted in blue. Below the table, it says 'D1: Direct heard by me over the air. Indirect: only via a neighbour. (G: Gateway: a HEY addressed to HG was seen from this node. 'not' means not observed. (M: Mesh: relay's foreign frames, from its last position frame. (FN: Neighbours: nodes this node hears, as far as this table can hold them. (FX: Exclusive: nodes that ONLY this neighbour hears. This is the value of a relay. (Cov: other direct neighbours that also hear G, 0 = only reach it. Details on the Path page. (Role: Super: largest exclusive share. Needed: has exclusive nodes. Redundant: everything it hears is heard by others.

Bottom Right Screenshot (DB0MMR-12 - Meshcom): Shows a window titled 'Window: 12 h, 27 row(s) fresh. Exclusive to me (only I hear them directly): DL3JA-2. Mesh needed.' The table lists 27 nodes. Node 1 (DB0MMR-12) is highlighted in blue. Below the table, it says 'D1: Direct heard by me over the air. Indirect: only via a neighbour. (G: Gateway: a HEY addressed to HG was seen from this node. 'not' means not observed. (M: Mesh: relay's foreign frames, from its last position frame. (FN: Neighbours: nodes this node hears, as far as this table can hold them. (FX: Exclusive: nodes that ONLY this neighbour hears. This is the value of a relay. (Cov: other direct neighbours that also hear G, 0 = only reach it. Details on the Path page. (Role: Super: largest exclusive share. Needed: has exclusive nodes. Redundant: everything it hears is heard by others.

HN report: auto (every 15 min, SNR >= -16 dB) – not sending (mesh/gateway on)
